## NISSAN 370Z

Many owners know that, under extreme conditions such as those achievable at the track, the limits of the standard Nissan 370Z brakes can be exceeded, sometimes resulting in a substantial deterioration in brake performance.

## UPGRADE?

Alcon's 370Z SuperKit front & rear brake package offers a range of benefits to improve your car's braking performance.

## DISC & BELL ASSEMBLY

**360x36mm front disc** and **350x28mm rear disc** offering significant **improvements in available brake torque**

Alcon assembly **lighter** than OE assembly - **reduced inertia**

**Increased** thermal capacity

Features Alcon **bespoke floating** drive system

Utilises Alcon's **unique Turbulator casting** for **maximum cooling efficiency**

Alcon crescent groove pattern allows for **improved gas release, increased initial bite & improved durability**

Rear disc and bell assembly **incorporates OE "drum in hat" handbrake configuration**

## CALIPERS

**Front caliper** is a **6 piston monobloc** machined from a **single piece forging**; **Rear caliper** is a **4 piston monobloc** which combined offers a **more positive, responsive pedal** as a result of **improved caliper and system stiffness**

**Increased pad area and volume** offers **better temperature management** and **improved brake efficiency**

**Pagid RS9-2** high performance road friction material offers **maximum performance** over a **wider temperature range**

Piston position designed to offer most **even pad wear**

Caliper specification designed to **improve overall system efficiency** whilst **maintaining the original balance and OE actuation**

## PRICE LIST

Part Number	Description	Retail
BKF8759D08	Nissan 370Z SuperKit Front & Rear Package	For pricing details please contact your local Alcon dealer
